

BudgetBridge

CP476B Group 6 | Final Full-Stack Personal Expense Tracker

Milestone 03

HTML + CSS + JavaScript + Node.js + MySQL

Goal and Major Features

BudgetBridge helps students and young adults securely record income and expenses, organize transactions, and understand their balance.

- Account registration, login, logout, and settings
- Transaction create, view, edit, delete, search, and filters
- Custom categories with protected defaults
- Dashboard totals and recent activity
- Date-range reports grouped by expense category

Architecture and Data Flow

Security and Data Integrity

- script password hashing; no plain-text passwords
- HTTP-only SameSite session cookie; token hash stored in MySQL
- Parameterized SQL and user ownership conditions
- Server-side validation, request-size limits, and same-origin checks
- Primary/foreign keys, unique rules, amount checks, and indexes

Testing, Demo, and Scope

12 automated tests passed

Validation | Authentication | CRUD | Reports | Isolation

- Final demo target: 9-10 minutes
- Local MySQL course demonstration
- Known limits: CAD only, no bank sync, no email password reset
- Next steps: deployment, MFA, exports, and budgeting alerts
