

Goal and Target Users

BudgetBridge helps students and young adults securely record income and expenses, organize transactions, and understand their current balance.

Major Features

- Registration, login, logout, and settings
- Transaction CRUD, search, and filters
- Custom categories with protected defaults
- Dashboard totals and recent activity
- Date-range reports grouped by category

Architecture and Data Flow

Security and Data Integrity

- script password hashing; no plain-text passwords
- HTTP-only SameSite sessions; token hashes stored in MySQL
- Parameterized values and user-ownership conditions
- Server-side validation, same-origin checks, request-size limits
- Primary/foreign keys, unique rules, amount checks, and indexes

Testing and Final Evidence

12 automated tests passed, 0 failed

- MySQL persistence verified
- Reports defect fixed and retested
- Final demo: approximately 9:22
- Testing report and final screenshots included

Scope and Next Steps

- Local course demonstration
- CAD display only
- No bank sync or email password reset
- Next: deployment, MFA, exports, recurring transactions, budgeting alerts

Team Responsibilities

Coordination: Thesopan & Rafay
Back end: Aditya
Front end/UI: Fisher & Tahmina
Database: Noor
Testing: Rida
Documentation: Jana & Ravishan
Reports: Sahil

HTML + CSS + JavaScript + Node.js + MySQL | Repository, Kanban snapshot, activity blog, README, testing report, and demo are included in the final package.
